#### Acknowledgments:

The editors would like to thank all those officers from State, Territory and Commonwealth agencies who assisted to help compile and action our requests for information and help. This assistance is highly appreciated and without it and the cooperation and help of policy, program and GIS staff from all agencies this publication would not have been possible. An additional huge thank you to Jason Passioura (ERIN, Department of the Environment and Heritage) for his assistance through the whole compilation process.

Text for this publication has in part been drawn from the publication, Hardy, A.M. (ed.) *Terrestrial Protected Areas in Australia: 1999 Summary Statistics from the Collaborative Australian Protected Areas Database (CAPAD) 2001* and Cresswell, I.D and Thomas G.M. *Terrestrial and Marine Protected Areas in Australia (1997)*.

# Protected Areas of Australia

## *Scope of this Publication*

This publication provides information and summary statistics on ‘protected areas’ of land and marine areas dedicated to nature conservation within Australia, oceanic islands such as Lord Howe Island administered by the States or Commonwealth and Australia’s external territories. There are nine separate protected area estates in this country, one in each of the six States and two self-governing Territories, and a Commonwealth system. A major difficulty in documenting and tracking the establishment and management of protected areas in Australia has been the myriad of reserve types gazetted. At present there are at least 50 different reserve ‘types’ vested in the nine jurisdictions that manage them. Each terrestrial and marine protected area type is collated into a spatial dataset known as Collaborative Australian Protected Areas Database (CAPAD). This publication provides details of protected areas that are contained within the 2002 version of CAPAD.

To assist in developing national statistics on protected areas and to track the development of the national reserve system, it was agreed in 1994 by the park agencies from the States/Territories and Department of the Environment and Heritage to adopt the (IUCN) definition of a ‘protected area’ and to also use the IUCN six level system of categories describing management intent as the common basis for comparing the many different types of protected areas. (See Box 1)

The World Conservation Union (IUCN) define a protected area as ‘an area of land and/or sea especially dedicated to the protection and maintenance of biological diversity, and of natural and associated cultural resources, and managed through legal or other effective means’ (IUCN 1994).

Protected areas listed in this publication are only those that meet the IUCN 1994 definition. CAPAD 2002 also provides details on the designated management intent for protected areas across Australia, identified by the allocation of an IUCN management category to each protected area to better monitor the level of protection accorded to biodiversity values. Decisions about which areas meet the IUCN definition, and the manner in which a gazetted area is allocated an IUCN category, are the responsibility of each jurisdiction. Reassessment of protected areas in respect to IUCN category allocation is an ongoing process. Some areas that have been listed in previous publications may no longer appear in this publication because they are now considered by the relevant jurisdiction not to meet the IUCN definition. For example, NSW has removed (since the 1997 publication) the reserve types ‘Historic Sites and ‘State Recreation Areas’ from the national protected areas database.

## *International Reporting on Australia’s Protected Areas*

Protected areas form part of each nation’s strategy for dealing with the conservation and sustainable use of biodiversity and landscape. These areas vary considerably in their objectives, the extent to which they are integrated into the wider landscape, and the effectiveness with which they are managed, but they nonetheless provide evidence of a nation’s commitment to conservation and sustainable development. (Harrison, unknown).

Recognizing the importance of protected areas, the United Nations Economic and Social Council adopted Resolution No. 713 (XXVII) in 1959, which called on IUCN to support the UN Secretary General in establishing a list of *national parks and equivalent reserves* in collaboration with United Nations Educational, Scientific and Cultural Organisation (UNESCO) and Food and Agriculture Organisation (FAO). The UN General Assembly at its Sixteenth Session endorsed this resolution in 1962. The *United Nations List of Protected Areas* has since been maintained by IUCN and the World Conservation Monitoring Centre (UNEP-WCMC), and was last published in 1998. It is compiled from information provided by national agencies responsible for protected areas, and includes all sites that meet the criteria established by the IUCN World Commission on Protected Areas (WCPA).

## BOX 1

### *IUCN Guidelines for Protected Area Management Categories*

#### **Category Ia**

Strict Nature Reserve: Protected Area managed mainly for science

Area of land and/or sea possessing some outstanding or representative ecosystems, geological or physiological features and/or species, available primarily for scientific research and/or environmental monitoring.

#### **Category Ib**

Wilderness Area: Protected Area managed mainly for wilderness protection

Large area of unmodified or slightly modified land and/or sea, retaining its natural character and influence, without permanent or significant habitation, which is protected and managed so as to preserve its natural condition.

#### **Category II**

National Park: Protected Area managed mainly for ecosystem conservation and recreation

Natural area of land and/or sea, designated to (a) protect the ecological integrity of one or more ecosystems for this and future generations, (b) exclude exploitation or occupation inimical to the purposes of designation of the area and (c) provide a foundation for spiritual, scientific, educational, recreational and visitor opportunities, all of which must be environmentally and culturally compatible.

#### **Category III**

Natural Monument: Protected Area managed for conservation of specific natural features

Area containing one or more specific natural or natural/cultural feature which is of outstanding value because of its inherent rarity, representative or aesthetic qualities or cultural significance.

#### **Category IV**

Habitat/Species Management Area: Protected Area managed mainly for conservation through management intervention

Area of land and/or sea subject to active intervention for management purposes so as to ensure the maintenance of habitats and/or to meet the requirements of specific species.

#### **Category V**

Protected Landscape/Seascape: Protected Areas managed mainly for landscape/seascape conservation and recreation

Area of land, with coast and seas as appropriate, where the interaction of people and nature over time has produced an area of distinct character with significant aesthetic, cultural and/or ecological value, and often with high biological diversity.

Safeguarding the integrity of this traditional interaction is vital to the protection, maintenance and evolution of such an area.

#### **Category VI**

Managed Resource Protected Areas: Protected Area managed mainly for the sustainable use of natural ecosystems

Area containing predominantly unmodified natural systems, managed to ensure long-term protection and maintenance of biological diversity, while providing at the same time a sustainable flow of natural products and services to meet community needs.

The IUCN guidelines were developed principally to communicate information relating to protected areas, and also as a means of assessing the status of the global network of protected areas. The IUCN Guidelines for Protected Area Management Categories thus provide international standards for collection, handling and dissemination of data on protected areas.

When the *UN List* was first established, there were no international agreements or programmes that either designated or recognized specific protected areas, although both the African Convention (1933) and the Western Hemisphere Convention (1940) recognized the importance of protected areas in general terms and encouraged their establishment. Since then, a range of international agreements and programmes designate or recognize specific protected areas. For example, the World Heritage and Ramsar Conventions are both concerned with protection of specific sites, and at least 11 other global and regional. Agreements such as the Convention on Biological Diversity and programmes recognise or designate specific protected areas. Article 8 of the Convention on Biological Diversity requires each Contracting Party to “*establish a system of protected areas or areas where special measures need to be taken to conserve biological diversity*” and to manage them effectively. This Convention has been ratified by 177 nations (WCMC 2000).

Information on nationally designated protected areas is currently compiled on a periodic basis by WCMC and the IUCN World Commission on Protected Areas working in close collaboration. The most recent edition of the *UN List* was published in 1998, following editions published in 1993, 1990, 1985, 1982, 1980, 1975, 1974, 1973 and 1971 (with a 1972 addendum). The first edition was published in 1967. Data from CAPAD 2002 has been forwarded to the WCMC for inclusion in the UN Protected Area list.

The *UN List* is derived from the World Database on Protected Areas, which is managed by the UNEP World Conservation Monitoring Centre working in collaboration with the IUCN World Commission on Protected Areas. UNEP-WCMC is working make the whole of this database available interactively over the Internet, with the ultimate intention of moving towards a more distributed process of information management. For further information on the UN List of Protected Areas see: [http://www.unep-wcmc.org/protected\\_areas/UN\\_list/index.htm](http://www.unep-wcmc.org/protected_areas/UN_list/index.htm)

### ***The Collaborative Australian Protected Areas Database (CAPAD)***

The Collaborative Australian Protected Areas Database (CAPAD) is a national database and contains information (spatial and textual) on all declared protected areas in Australia that have been allocated an IUCN category and exist as spatial data. The Australian Government (through Department of the Environment and Heritage) has accepted responsibility for the maintenance of CAPAD with the cooperation of State and Territory Government departments and agencies.

The currency of CAPAD data is maintained through the compilation of CAPAD versions that can be discriminated by the use of a suffix. Thus, the data from which the statistics were derived for the publication *Terrestrial and Marine Protected Areas in Australia 1997* is now known as CAPAD97 and the information and statistics available in this current publication are derived from the CAPAD2002. The currency of the data within each of the CAPAD versions varies from State to State and is dependent upon the availability of State/Territory data. In CAPAD2002, for the terrestrial protected areas the least current information is dated October 2001 (Queensland protected areas) and the most current is 11 September 2002. It is anticipated that CAPAD versions will be compiled regularly. For the marine protected areas data currency varies from May 2002 to December 2002.

The value of CAPAD lies in the ability to compare a diverse array of reserve 'types' within and across jurisdictions by using the declared IUCN levels of protection and management intent as well as providing the authoritative spatial dataset for assessing the status of Australian flora and fauna. While there are still some inconsistencies in the use of the IUCN categories between jurisdictions, this system provides the best available framework for the compilation of statistics and the comparison of protected areas between States, Territories and reserve areas worldwide.

Many protected areas, particularly larger ones, contain a range of smaller areas or management zones that satisfy different categories within the IUCN system. For example, the Alpine National Park in Victoria is listed as a category II protected area overall but contains a number of zones that are classified as category IA and IB. The rule adopted for the compilation of statistics in this publication is that recommended in the IUCN guidelines: that the category for the entire protected area should be that of the largest component within the protected area. However, some of the Victorian data tables do provide a finer level of information. Marine protected areas, which may include a series of use zones are listed by the dominant (majority area) zone for that reserve.

### ***Tracking Additions to Australia's Protected Areas***

This publication is the ninth in a series produced by Department of the Environment and Heritage, the Australian National Parks and Wildlife Service and its predecessors. The first five were respectively titled *Nature Conservation Reserves in Australia* in 1980, 1982, 1984, 1986, 1988, the sixth and seventh were titled *Terrestrial and Marine Protected Areas in Australia* 1991 and 1997 and the eighth was titled *Terrestrial Protected Areas in Australia: 2000 Summary Statistics from the Collaborative Australian Protected Areas Database (CAPAD) 2001*. Prior to this series the Australian Academy of Science published a series of reports compiled by its State sub-committees on the status of national parks (NSW 1962, WA 1962, SA 1963, WA 1963), culminating in an Australian report *National Parks and Reserves in Australia, 1968*.

In its 1968 report the Australian Academy of Science provided details of the existing national parks and reserves, commented on the adequacy of the current systems of national parks (and reserves) and expressed the need to 'ensure that representative

environments are available as flora and fauna reserves, that areas of special geological or anthropological interest are not despoiled, and that features of unique scientific interest will still be available for study by future generations' (Australian Academy of Science, 1968). Over 30 years later, this need is expressed in the goals of the Australian Government's National Reserve System Program to assist with the establishment and maintenance of a comprehensive, adequate and representative system of reserves.

### ***Development of the National Reserve System***

Protected areas are those systems of National Parks and other types of conservation areas dedicated to the protection and maintenance of biological diversity and formally managed and protected for this purpose. In Australia the nine separate protected area systems are collectively known as the National Reserve System (NRS). Additions to the NRS come from a variety of sources including the dedication of crown lands to protected area status from other uses either on a parcel by parcel basis or a series of parcels stemming from a strategic exercise such as the regional forest agreement process, the purchase of specific properties on the open market by park agencies and bequests from private land holders to park agencies.

In addition to reserves on crown lands there are a growing number of private protected areas managed for biodiversity conservation by non-government organisations such as the Australian Bush Heritage Fund and the Australian Wildlife Conservancy (AWC). In areas which have been substantially cleared, protected areas networks, where a series of small remnants both on crown and private land are managed as a single unit, are increasing in importance for protecting biodiversity values. Where such remnants are protected in perpetuity by covenants with high levels of legal protection, they may qualify for inclusion in the NRS and thus be counted in CAPAD where adequate spatial information exists. The criteria by which private protected areas are included in the NRS and CAPAD is currently being addressed for resolution prior to CAPAD 2004.

Since 1992, the Australian Government, in cooperation with the State and Territory Governments, has run a grants program, titled the National Reserve System Program, to help develop further the NRS. The NRSP has provided a focus for developing scientific and policy frameworks to address reserve establishment across Australia to ensure that, while Australia may have nine different administrative systems, there is a common approach towards the development of the NRS. Cornerstones of this approach have been a commitment by all jurisdictions towards the development of a comprehensive, adequate and representative (CAR) system of protected areas and the use of the Interim Biogeographic Regionalisation for Australia (IBRA) as the framework to plan and track progress towards meeting CAR objectives. These objectives were articulated both in the National Forest Policy Statement in 1992 and the National Strategy for Conservation of Australia's Biological Diversity in 1996. Australia is also a signatory to the Convention on Biodiversity which requests countries to establish a system of protected areas to conserve biodiversity; develop guidelines for the selection, establishment and management of protected areas.

Under the Natural Heritage Trust (NHT), the Australian Government significantly increased funding for the National Reserve System Program in 1997 by providing \$68 million over six years (until July 2002) for the acquisition or covenanting of lands for inclusion in the national reserve system. Funding for this activity by the Australian Government continues today as part of the extension of the Natural Heritage Trust until 2006. An important component of the NRSP initiatives under the Natural Heritage Trust were specific Australian Government commitments to further the development of private protected areas and the establishment of Indigenous Protected Areas. Indigenous Protected Areas are being established through the National Reserve System Program in accordance with the IUCN protected area management categories. These categories offer Indigenous landowners protected area paradigms that can accommodate customary values and uses. Based on CAPAD2002, seventeen IPAs have now been declared adding 13.79 million hectares of land to the NRS.

The former Standing Committee on Conservation (SCC) of the Australian and New Zealand Environment and Conservation Council (ANZECC) approved guidelines for developing the NRS that were published in 1999. These guidelines drew upon the format developed for the *Guidelines for Establishing the National Representative System of Marine Protected Areas 1996* to promote consistency in approach for terrestrial and marine environments.

Following on from this work, the ANZECC National Reserve System Taskforce has examined the definition and goals of the NRS as well as clarifying criteria for the inclusion of private land and Indigenous Protected Areas as part of the NRS. As a result of these deliberations Indigenous Protected Areas are included in the CAPAD 2002 figures and Heritage Agreement Areas in South Australia have also been included, though in the summary statistics only as no spatial data meeting CAPAD standards exists to represent them. This work continues today following the cessation of ANZECC through the Land, Water

and Biodiversity Committee (LWBC) of the Natural Resources Management Ministerial Council (NRMMC), which also includes representatives from each jurisdiction.

All the jurisdictions have also been working together to improve the development and management of Australia's protected area systems. One mechanism for such cooperation is the Ministerial Committee on National Park and Protected Area Management, which reports to the LWBC in respect to best practice in reserve management and consistency in management responses to key issues across State borders.

### ***Interim Biogeographic Regionalisation for Australia (IBRA)***

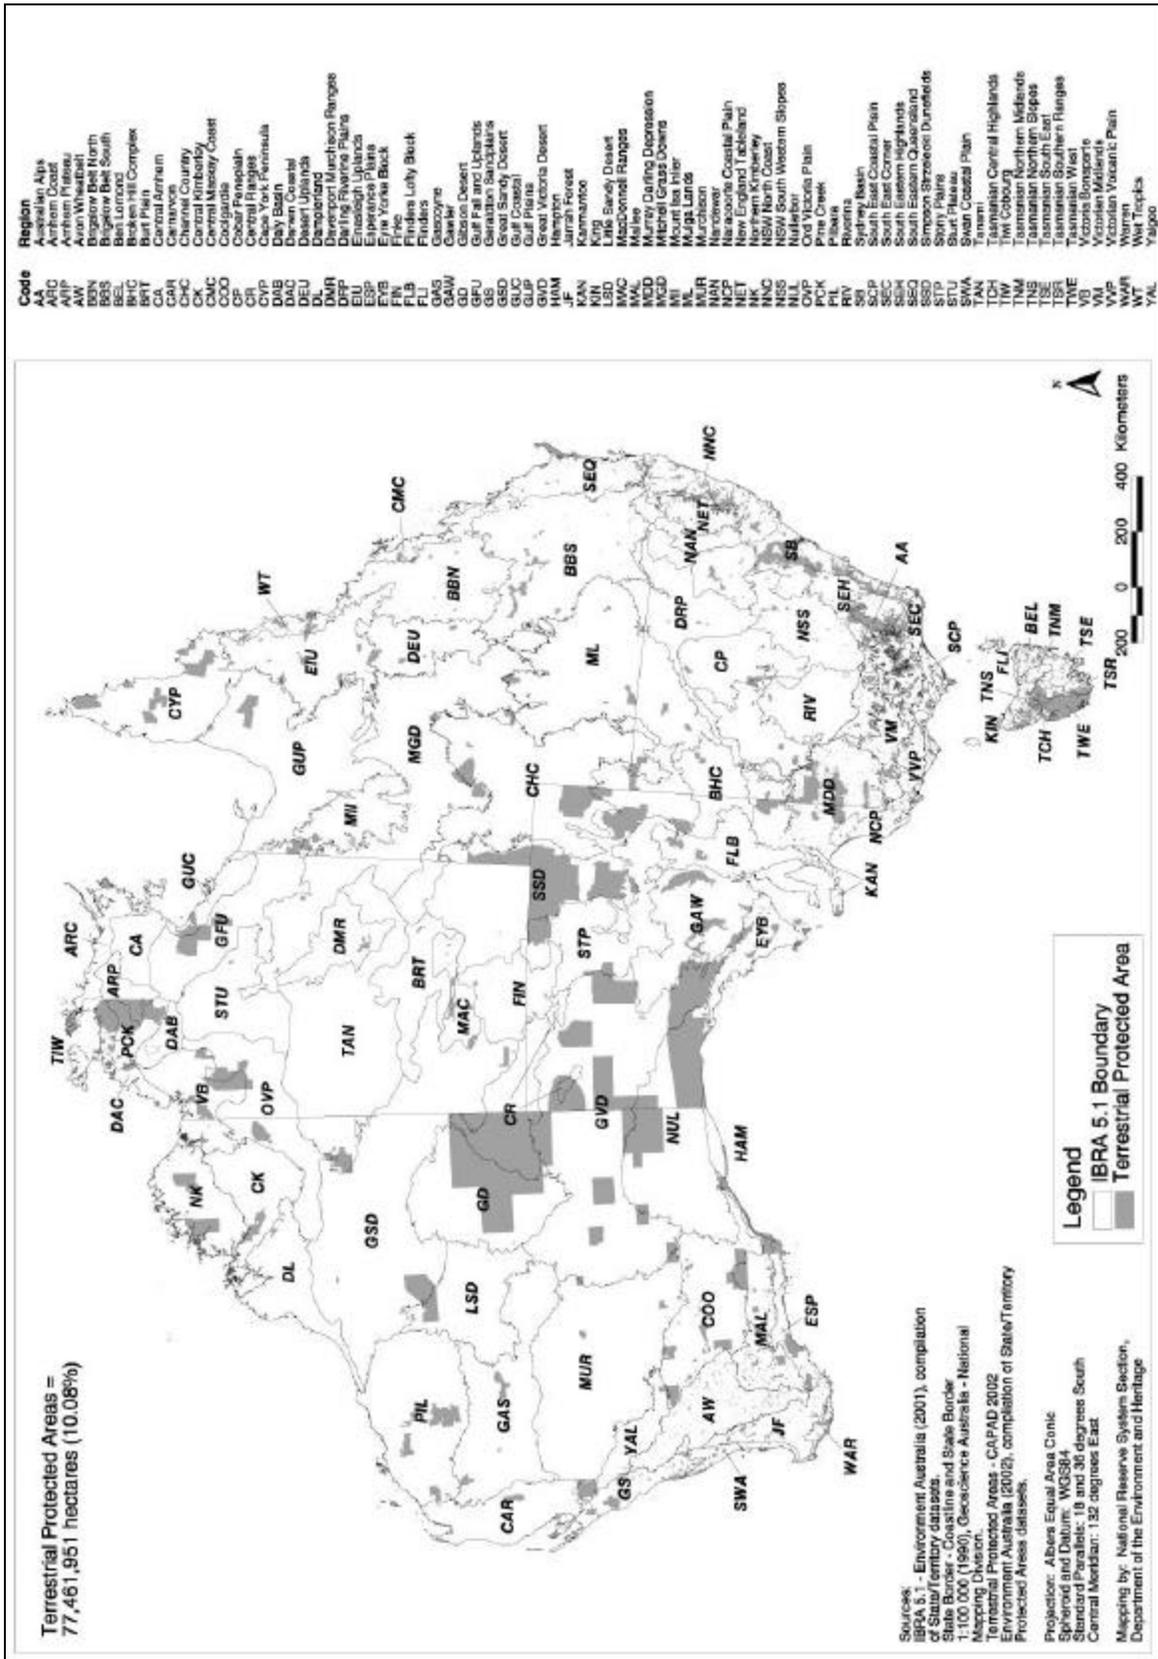

The Interim Biogeographic Regionalisation for Australia (IBRA) (Thackway and Cresswell, eds, 1995, Environment Australia 2000) is a framework for conservation planning and sustainable resource management within a bioregional context. IBRA regions represent a landscape-based approach to classifying the land surface from a range of continental data on environmental attributes. Like CAPAD, the data currency of IBRA versions is identified by the use of a suffix. Thus, the IBRA data used in this publication is based on IBRA version 5.1 (Map 1) which includes eighty-five bioregions, each reflecting a unifying set of major environmental influences that shape the occurrence of flora and fauna and their interaction with the physical environment. However, unlike CAPAD, IBRA will not be regularly updated unless there is a specific need to modify boundaries. It is anticipated that some minor modifications may be warranted to only a few regions in 2003 as more detailed data on bioregional boundaries becomes available. Table 1 outlines the area of each bioregion for reference.

The report *Revision of the Interim Biogeographic Regionalisation for Australia (IBRA) and the Development of Version 5.1. - Summary Report*, outlines the process by which IBRA version 5.1 was developed (<http://www.ea.gov.au/parks/nrs/ibra/version5-1/index.html>).

The distribution of protected areas across Australia is the result of more than one hundred and twenty years of acquisitions, based on changing concepts of why we set aside natural areas and differing availability of lands. For instance, previous acquisition strategies based on setting aside areas of natural beauty have resulted in certain ecosystem types being represented far more comprehensively than others.

IBRA represents an agreed and systematic framework for reviewing progress towards the development of a comprehensive, adequate and representative (CAR) reserve system and for setting priorities in actions directed to improving the reserve system. Based on CAPAD2002 figures, 39 regions have greater than 10 per cent of their area in protected areas. A further 13 regions have between 5 per cent and 10 per cent, and 29 regions have between 1 per cent and 5 per cent. A further four regions have less than 1 per cent of their area in protected areas, mainly located in arid and seasonally arid regions of central and northern Australia. Only one region, Central Arnhem has no protected areas at all, but is Indigenous land with limited clearing and development.

## Overview of CAPAD Data and 2002 Summary Statistics

Terrestrial and marine protected areas data were collated from data supplied by State/Territory and Australian Government protected area management agencies. The data provided was requested to meet agreed specifications and to have a data validity of July 2001 to June 2002 and as such the data has varying dates of currency depending on jurisdiction. Details on the currency of data used in CAPAD 2002 are in Table 2. The data was manipulated to meet defined specifications and appended to form two spatial datasets including a continental terrestrial protected areas database and a marine and external territory protected areas database. The spatial and textual data of these datasets were used to calculate data in this report. Data supplied by jurisdictions was generally considered to be correct with some checking performed. Anomalies and discrepancies found were highlighted to data custodians with these either confirmed to be correct or updated information supplied.

**Table 2: Data Custodians and Data Currency**

Data Custodian	State/ Territory	Data Supplied	Data Currency
		(data created by Department of the Environment and Heritage from supplied gazettal notice)	
Forestry SA	SA	Native Forest Reserves	30/06/2001
Primary Industries and Resources SA	SA	Aquatic Reserves	Supplied 23/10/2002
Department of Primary Industries, Water and Environment	TAS	Tasmanian CAPAD2002 containing: Public Land Classification (those meeting the IUCN classification) Private Nature Reserve Conservation Covenants Wellington Park	1/06/2002
Department of Sustainability and Environment (formally Department of Natural Resources and Environment)	VIC	Victorian CAPAD 2002 (derived from Public Land Management layer (1:100 000)).	Supplied 06/2002
Department of Conservation and Land Management	WA	Existing CALM Managed Lands and Waters	02/2002

Terrestrial protected area summary statistics were generally based on the gazettal area. In some cases this information was not supplied and as such the GIS areas (calculated by Department of the Environment and Heritage based on an Albers Equal Area Conic projection) were used to fill any gaps. These are indicated in jurisdiction listings by an asteric next to the protected area name in the State/Territory listings. The majority of marine and external protected area statistics were based on GIS areas, as there were some large discrepancies between gazettal size and calculated GIS area. Official figures for the Great Barrier Reef Marine Protected Area as calculated by the Great Barrier Reef Marine Park Authority are (34,540,000 (IA - 48,100, II - 1,577,200, IV - 256,000, VI - 32,658,700). This information has also been supplied as a note for the relevant tables.

In order to meet the requirements of the IUCN List of Protected Areas, of which CAPAD is a component, marine protected areas have been listed to take into account of multiple zoning within a protected area. Marine protected areas with multiple management zones have been allocated an IUCN value based on the dominant zone. To represent the multiple use of the protected areas, after the area total there is a breakdown of reserve area by IUCN category. Within the IUCN category summaries, area calculations are based on analysis of the management zones and are not on dominant IUCN value. As some marine protected areas have multiple management zones the count of marine protected areas is often less than the number of management zones. The calculations as described for marine protected areas does not apply to terrestrial protected areas, however data received from Victoria had data on terrestrial protected areas wholly contained within existing, larger protected areas. These have been listed separately as to avoid double counting in the summary statistics.

## Limitations of the Data

In compiling the data and statistics certain procedures were undertaken and assumptions made to ensure consistency with previous year's compilations and to deal with technical issues of compilation. These are listed below to make sure users of the data in this report are made aware of the issues.

- **Only those protected areas** meeting the IUCN criteria of a protected area with spatial data and attribution compliant with agreed CAPAD standards have been included in CAPAD 2002. Summary statistics are provided for South Australian Heritage Agreement areas, which meet the IUCN protected definition, but spatial data is not available following agreement from the jurisdictions.
- **Protected area types have been removed from the national reserve system since previous versions of CAPAD.** Reassessment of protected areas in respect to IUCN categories occurs periodically. At times this revaluation means that whole reserve types are removed from the national reserve system as they are now considered not to meet the IUCN definition of a protected area. This has resulted in some areas previously listed no longer appearing in this publication. The reduction of reserve types results in a reduction of the total area of the national reserve system; however the growth in the remaining types has typically been greater, leading to an overall increase. In some instances, reserves affected may be re-designated under different legislation or as a different category of reserve, which would allow their inclusion in CAPAD once again.

- **Data does not include most non-Government organisation managed protected areas.** Due to collection processes and data availability non-Government organisation managed reserves are not included in this version of CAPAD. Exceptions to this are the inclusion of conservation covenants in Tasmania and Heritage Agreement areas in South Australia.
- **Data assumed to be correct as supplied by data custodians.** Data has been compiled as supplied by data custodians although attribute and spatial data was compared to CAPAD 2000 with anomalies checked by data custodians.
- **Gazettal date issues.** Gazettal dates are not always supplied by States and Territories in the same format, with some jurisdictions supplying data on latest gazettal as well as the original gazettal date, but others the latest gazettal date only. This can cause confusion, for example where minor additions to a reserve, such as the closure of a gazetted road, may mask the date the vast majority of a reserve was actually declared. A large number of gazettal dates are also missing. Of all CAPAD attributes, the gazettal date is thus the least reliable and should be used accordingly. It has been noted also that some dates supplied may contain errors, but it is beyond the scope of the CAPAD compilation process to validate these data. In most instances validation can only occur with reference to paper files on the gazettal of individual reserves which is a very labour intensive and time consuming process. EA is seeking the ongoing cooperation of the jurisdictions to improve data accuracy in this regard.
- **Not all data sets were supplied in the requested format** resulting in Department of the Environment and Heritage manipulating the data to ensure compilation was possible. Fields that were not supplied were either not used in the production of this report or, if possible, data was used from previous protected areas reports.
- **IUCN category allocation not consistent.** IUCN categories are used for comparison of the different protected areas across jurisdictions. The allocation of IUCN categories is undertaken by States and Territories and as such is not always consistent. Through cooperative efforts jurisdictions aim to reduce these inconsistencies over time.
- **Gazettal area and GIS area.** The Gazettal area was used for the terrestrial protected areas however GIS area was used for those protected areas where the data was not available. Marine protected areas and external protected areas figures were based on GIS area due to large discrepancies between gazettal size and GIS area.
- **Terrestrial Vs Marine.** A protected area gazetted as terrestrial protected area may have a marine component and vice versa for a marine protected area. In order to be consistent with the previous versions of this publication a protected area is determined terrestrial or marine based on the primary purpose of the reserve. If a reserve was gazetted as a terrestrial protected area this is how it has been listed and statistics calculated. This has resulted in the potential for some area figures to be inflated.
- **Coastline for Terrestrial CAPAD and IBRA 5.1 differ.** CAPAD terrestrial data coastline is as supplied by States/Territories. This data does not always match the representation of the coastline in IBRA 5.1 data. This has resulted in some protected areas being cut during intersection of CAPAD and IBRA. This has resulted the IBRA 5.1 protected area statistics representing smaller total hectares than the original CAPAD data.
- **Not within IBRA 5.1.** In the protected areas listings the IBRA region in which the protected area is located has been indicated. Due to the variance between coastline data in the CAPAD and IBRA spatial datasets there are some protected areas that are outside the extent of the IBRA dataset. Those protected areas that are outside IBRA boundaries have been indicated as such with the term “Not within IBRA 5.1”. The majority of these are island reserves.
- **Queensland Marine Protected Areas** were supplied as three distinct spatial datasets including Dugong Protected Areas, Fish Habitat Areas and State Marine Parks. All of these data sets have some level of overlap. In order to avoid double counting in the Queensland statistics, the total areas are based on intersected data area calculations, resulting in accurate total area calculations. In the National summaries Great Barrier Reef Marine Park was also included in the intersection to enable accurate total area figures to be displayed. In the Queensland listing of marine protected areas individual protected area sizes are listed (i.e. not taking into account of protected areas overlap) resulting totals that are higher than the total protected areas.
- **Protected Area Overlap along State/Territory borders.** Some data supplied by jurisdictions spatially overlapped with another jurisdiction. To rectify this data was clipped to the Stateline using the Australian Coastline and State Borders (1:100 000 Geoscience Australia, 1990). Mullinger Swamp in South Australia was the only exception, as it would have been wholly clipped from the data following this method. The protected area was instead shifted to its approximate location on the South Australia and Victorian Border.

## Summary Statistics

This report contains summary statistics derived from textual information and data resulting from an intersection of the CAPAD and IBRA spatial data and textual information. The aim of the data is to assist the Commonwealth and its partners in the monitoring and assessment of the reservation status of land for conservation purposes in Australia. Analysis of the spatial data in particular allows tables to be compiled to assess the percentage of protected areas in each IBRA region by both reserve type and, more importantly, by IUCN category. A table is provided (for each jurisdiction except the Commonwealth) which differentiates categories I to IV and categories V & VI as separate percentages of IBRA Regions, to indicate the degree to which areas are managed for human intervention and biodiversity conservation. In order to help locate a protected area and have an understanding of the environment it protects the IBRA region it is located in are included for each reserve.

All areas listing in this report are in hectares. The protected area listings and summary statistics have been divided into two sections in this publication:

1. The **first section contains national summary statistics** on protected areas for Australia as a whole, grouped according to reserve type and by IUCN category. It also provides summary information on protected areas as a proportion of each biogeographic region (IBRA 5.1) of Australia. The coverage of terrestrial and marine protected areas of Australian is displayed in map 2.
2. The **second section contains CAPAD listings and summary statistics by jurisdiction** and is comprised of statistics (type summaries as well as statistic information) and protected area listings. As CAPAD 2002 contains information on different types of protected areas the order of display is as follows:
  - Terrestrial Protected Areas
  - Marine Protected Areas
  - External Territory or Oceanic Island Protected Areas

The CAPAD **statistics** includes summary and statistical information for each jurisdiction in Australia.

Summary information includes tables on:

- protected areas classified according to reserve 'type' designations
- protected areas classified according to IUCN reserve management categories

Statistical information includes tables on:

- protected areas classified according to reserve 'type' designations as a proportion of IBRA regions
- protected areas classified according to IUCN management categories as a proportion of IBRA regions

The CAPAD **listings** include information on IUCN category, latitude and longitude (expressed in decimal degrees), gazetted area (in hectares), year declared (year of gazettal) and bioregion (IBRA 5.1) that the protected area is located in. Maps of protected areas within each jurisdiction are also provided at the beginning of each jurisdiction. (See Maps 3 - 11).

In order to reduce the size of the tables, acronyms have been used for IBRA 5.1 Region names and terrestrial protected areas types. Full names of the IBRA 5.1 regions can be found in Table 1 with the terrestrial protected area types listed below.

**Table 3: Protected Area Types and Type Codes**

PA Type Code	PA Type	PA Type Code	PA Type
5GR	5(g) Reserve	NP(A)	National Park (Aboriginal)
ACCP	Conservation Covenant	NP(C)	National Park (Commonwealth)
CA	Conservation Area	NP(S)	National Park (Scientific)
COR	Coastal Reserve	NR	Nature Reserve
CP	Conservation Park	NRA	Nature Recreation Area
CR	Conservation Reserve	OCA	Other Conservation Area
EA	Educational Area	OP	Other Park
FPA	Feature Protection Area	PA	Protected Area
FR	Forest Reserve	PINP	Phillip Island Nature Park
GR	Game Reserve	PNR	Private Nature Reserve
HR	Historical Reserve	RA	Reference Area
HS	Historic Site	RNA	Remote and Natural Area
HTR	Hunting Reserve	RP	Recreation Park
IPA	Indigenous Protected Area	RR	Regional Reserve
KCR	Karst Conservation Reserve	RES	Reserve
MAA	Management Agreement Area	RSR	Resource Reserve
MR	Miscellaneous Reserve	SA	Scientific Area
NAP	Nature Park	SP	State Park
NAP(A)	Nature Park (Aboriginal)	SR	State Reserve
NCR	Nature Conservation Reserve - Wildlife Reserve (no hunting)	WA	Wilderness Protection Area
NFR	Native Forest Reserve	WP	Wilderness Park
NP	National Park	WZ	Wilderness Zone

This report does not contain:

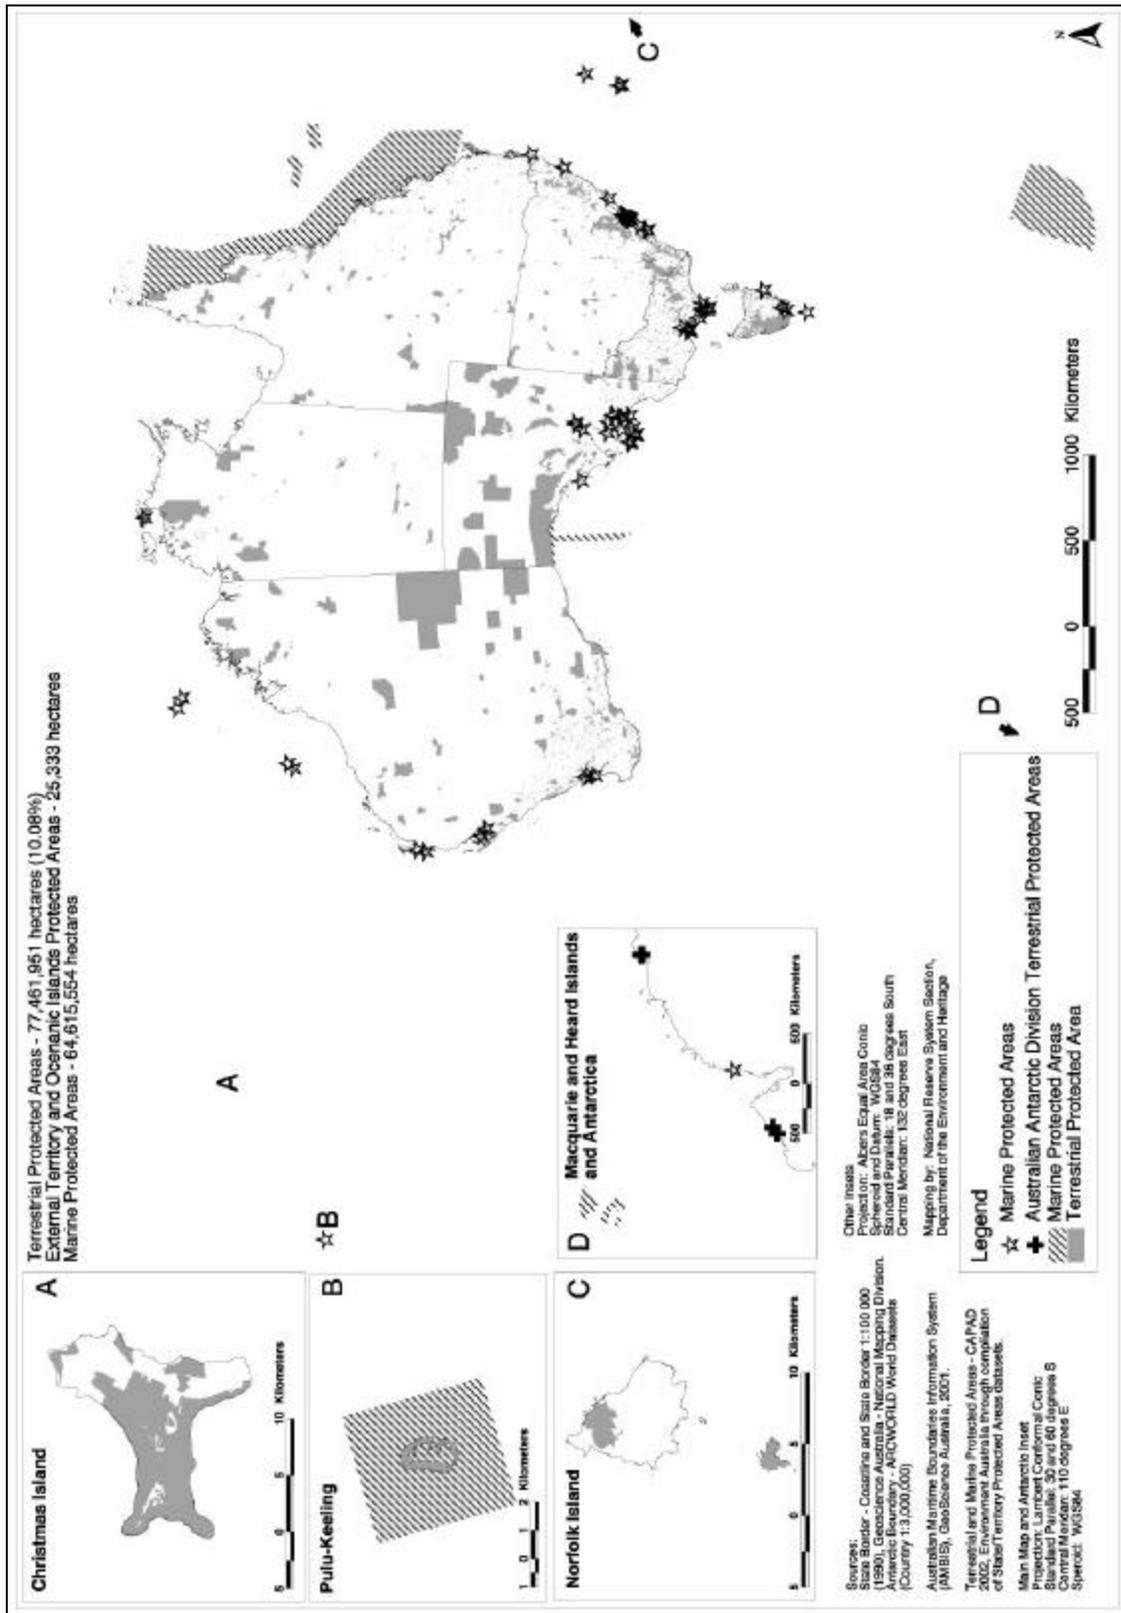

- Information on the legislation, administration and categories of protected areas that apply in each jurisdiction
- Information on areas in Australia that have been designated under the World Heritage Convention, the Convention on Wetlands (Ramsar, Iran 1971), and the UNESCO Biosphere Reserves Program. These are not all gazetted protected areas and have not been allocated IUCN categories.

# National Protected Area Summary Statistics

The National summary statistics have been presented as follows:

- Summary of Protected Area type including:
  - Terrestrial Protected Areas in Australia by Type
  - Marine Protected Areas by Type
  - National Oceanic Islands and External Territory Protected Areas by Type
- IUCN Summary including:
  - Australian Terrestrial Protected Areas by IUCN Management Category
  - National External Territory and Oceanic Island Protected Areas by IUCN Management Category
  - National Marine Protected Areas by IUCN Management Category
- Protected Areas by Bioregion, including
  - Protected Areas by IUCN Management Category in each Bioregion (IBRA 5.1) of Australia
  - Australian IUCN Management Categories by Bioregion (IBRA 5.1)

# Map 2: Protected Areas of Australia 2002

## Australian Protected Areas by Type

### Summary of Terrestrial Protected Areas in Australia by Type

Designation - Protected Area Type	Number	Area (ha)	Jurisdiction	% Australia

## Summary of Marine Protected Areas by Type

Type	Number	Area (ha)	Jurisdiction
Antarctic Special Protection Area	1	2,088	Comm
Aquatic Reserve	29	17,866	NSW, SA
Conservation Park	2	202	SA
Dugong Protection Area	16	637,298	QLD
Fish Habitat Area	78	729,150	QLD
Fisheries Reserve	5	3,357	VIC
Historic Shipwreck	14	827	Comm
Historic Shipwreck Protection Zone	1	78	SA
Marine & Coastal Park	3	62,143	VIC
Marine National Nature Reserve	2	241,714	Comm
Marine National Park	1	126,292	SA
Marine Nature Reserve	4	114,716	TAS, WA
Marine Park	25	59,731,953	Comm, NSW, NT, QLD, SA, VIC, WA
Marine Reserve	5	6,532,748	Comm, VIC
National Nature Reserve	3	1,786,500	Comm
National Park	2	3,307	Comm
Nature Reserve	1	81,538	TAS
<b>Total</b>	<b>192</b>	<b>64,615,554*</b>	

**\*Note:** Total is not a sum of all protected area type areas due to overlapping of Queensland marine protected areas. To avoid double-counting total area figure is calculated based on a union of Great Barrier Reef Marine Park, Dugong Protection Areas, Fish Habitat Areas and Queensland State Marine Parks.

## Summary of National Oceanic Islands and External Territory Protected Areas by Type

Type	Number	Area (ha)	Jurisdiction
Antarctic Special Protection Area	5	1,362	Comm
National Park	3	9,542	Comm
Nature Reserve	1	13,182	TAS
Permanent Park Preserve	1	1,247	NSW
<b>Total</b>	<b>10</b>	<b>25,333</b>	

## Australian Protected Areas by IUCN Management Category

### Australian Terrestrial Protected Areas by IUCN Management Category

IUCN Category	Number	Area (ha)
IA	2,006	18,103,255
IA (Heritage Agreement Areas)	1,193	564,682

<b>QLD Total</b>	<b>508</b>	<b>7,120,217</b>		100.00%
<b>Area of QLD</b>		<b>172,973,671</b>		

### Summary of QLD Marine Protected Areas by Type\*

Type	Number	Area (ha)
Dugong Protection Area	16	637,298
Fish Habitat Area	78	729,150
Marine Park	7	5,243,546
<b>Total</b>		<b>5,789,523</b>

\***Note:** To avoid double counting due to overlapping marine parks, total area figure is based on union of Dugong Protection Areas, Fish Habitat areas and Queensland Marine Parks.

## Queensland Protected Areas by IUCN Management Category

### Terrestrial Protected Areas by IUCN Management Category in QLD

IUCN Category	Number	Area (ha)	% Total	% QLD
IA	51	21,139	0.30%	0.01%
II	215	6,662,825	93.58%	3.85%
III	174	34,940	0.49%	0.02%
IV	9	52,412	0.74%	0.03%
<b>I-IV Total</b>	<b>449</b>	<b>6,771,316</b>	<b>95.10%</b>	<b>3.91%</b>
V	25	1,253	0.02%	0.00%
VI	34	347,648	4.88%	0.20%
<b>V-VI Total</b>	<b>59</b>	<b>348,901</b>	<b>4.90%</b>	<b>0.20%</b>
<b>Total</b>	<b>508</b>	<b>7,120,217</b>	<b>100.00%</b>	<b>4.12%</b>

### QLD Marine Protected Areas by IUCN Management Category\*

IUCN Category	No. of Reserves	Management Zones	Area (ha)
IA	0	2	5,799
IB	0	0	0
II	0	6	258,698
III	0	0	0
IV	101	101	5,514,675
<b>I-IV Total</b>	<b>101</b>	<b>109</b>	<b>5,779,171</b>
V	0	0	0
VI	0	1	10,352
<b>V-VI Total</b>	<b>0</b>	<b>1</b>	<b>10352</b>
<b>Total</b>	<b>101</b>	<b>110</b>	<b>5,789,523#</b>

**Note:** \* An individual marine protected area may have multiple management zones. Each protected areas is assigned an IUCN management category based on dominant management zone. Area calculations are based on areas calculated for the management zones.

#Due to overlap of QLD Marine parks total figure is based on union of Dugong Protection Areas, Fish Habitat areas and Queensland Marine Parks.
